

ABDUL SAMI GHURI

Backend Engineer | AI Engineer

Karachi, Pakistan | +92 321 2893105 | abdulsamig334@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend & AI Engineer specializing in scalable API design, secure authentication/authorization, and Agentic AI / LLM-powered workflows. Skilled in architecting modular, clean/layered backend systems (ASP.NET Core, FastAPI, Node.js) and resolving production-grade concurrency and state-synchronization issues. Experienced shipping AI-integrated SaaS products end-to-end — from system design through beta deployment — with a production engineering mindset focused on maintainability and future scalability.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C#

Backend Development: FastAPI, Node.js, Express.js, ASP.NET Core, EF Core, RESTful APIs, JWT Auth

AI & Agentic Systems: LLM Integration, RAG, LangChain, Agno, Hugging Face, Groq API, Prompt Engineering, Agentic Workflows

Software Architecture: Modular Monolith, Clean/Layered Architecture, API Design, Concurrency Handling, Microservices-Ready

Databases: MySQL, MongoDB, PostgreSQL, Schema Design & Indexing

Frontend & Mobile (Supporting): React.js, Next.js, Tailwind CSS, Flutter

Tools & Deployment: Git, Vercel, Postman, Jest, Playwright, Jira, SonarQube, AI Coding Tools (Copilot, Codex, ChatGPT, Claude, Gemini)

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern | 10Pearls Shine Program

Dec 2025 – Mar 2026

- Built and shipped full-stack web application features end-to-end using Node.js, Express.js, MySQL, and React.js.
- Designed and integrated modular backend APIs, improving separation of concerns across services.
- Engineered AI-powered features via LLM integration to enhance user interaction and workflow automation.
- Enforced code quality through unit testing and static analysis (Jest, SonarQube); evolved the project into an independent, production-bound AI-powered SaaS product.

Full-Stack Mobile App Developer Intern | Matz Solutions Pvt Ltd

Jul 2025 – Sep 2025

- Built Flutter mobile application UI and implemented REST API consumption for real-time data and authentication flows.
- Integrated backend APIs with MongoDB and MySQL for application data management.
- Owned bug fixing and end-to-end debugging across mobile and backend integration points.

FEATURED PROJECTS

Notaviq – AI-Powered Knowledge Management Platform — [Live Site](#)

Tech Stack: Node.js, Express.js, MySQL, JWT, Groq API, React.js, Vercel

- Architected a full-stack AI-powered SaaS platform for intelligent note management, deployed on Vercel with a separately hosted production API.
- Resolved a production concurrency bug where rapid edits caused overlapping autosave calls and stale writes — fixed via request debouncing and synchronized state management to guarantee write consistency.
- Designed secure JWT-based authentication and account recovery workflows with email verification.
- Integrated LLM-powered capabilities for note summarization, title generation, semantic tagging, and contextual note conversations; currently in beta with active early users.

ApplyFlow AI – AI-Powered Job Application Platform (Solo) — [GitHub](#)

Tech Stack: ASP.NET Core, C#, PostgreSQL, Entity Framework Core, Playwright, Jira, Next.js, TypeScript, Tailwind CSS, JWT

- Architected ApplyFlow AI as a modular monolith (Controllers → Services → EF Core), prioritizing clean separation of concerns over premature microservices complexity while keeping boundaries microservices-ready.
- Designed JWT-based stateless authentication and RESTful APIs for application tracking, an analytics dashboard, a Kanban workflow, and resume management.
- Modeled a normalized PostgreSQL schema with Entity Framework Core to enforce data integrity and support efficient relational queries across users, applications, and workflow stages.
- Engineered Playwright test coverage (21/21 passing) and delivered a Next.js/TypeScript frontend consuming the backend APIs end-to-end; managed delivery via Jira Scrum.

YouTube AI Analyzer Agent

Tech Stack: Python, Agno, LLMs

- Built an autonomous AI agent that extracts YouTube video metadata and generates AI-powered summaries and insights.
- Designed multi-step agent workflows with prompt orchestration, demonstrating Agentic AI design patterns for task automation.

EDUCATION

Bachelor of Science in Software Engineering

Expected January 2027

CGPA: 3.58 / 4.00

ACHIEVEMENTS

- Merit Scholarship Recipient (4x) | Director's Award Recipient (2x) | Highest Semester GPA: 3.9
